

Monitoring Services

BAKER ASSOCIATES

Hydro Solutions

Providing Effective Surface and Groundwater Solutions

Baker Associates Hydro Solutions (BAHS) provide a range of water and environmental monitoring services.

Monitoring services include:

- Water level monitoring
- Vibrating wire piezo monitoring
- Spot flow monitoring
- Continuous flow monitoring
- Water quality monitoring
- UKAS accredited laboratory testing
- Inclinator monitoring
- Gas monitoring
- Automated and remote monitoring
- Metering and compliance monitoring
- Pump test monitoring
- Factual & interpretative reporting
- Installation & calibration of monitoring equipment.
- Site surveys

The scale and duration of monitoring projects varies from days through to years depending on the client and their requirements. Data collection visits are normally pre-arranged to suit the client, however they can be on demand or in response to a level or flow alarm. Our equipment is modern, reliable, regularly tested and calibrated.

Our team are experienced and trained to make accurate measurements which are routinely quality assured. We recognise the importance of reliable valid data, for this reason we guarantee our clients are able to use the values reported to make significant business and environmental decisions.
